

Hello,World

——Officially join bilibili and GitHub

[SOTW]

Preface:

I am determined to become an **Embedded systems engineer**.

[Our destination is the sea of stars.]

-What is the reason for joining bilibili and GitHub?

As the foreword says, I am determined to become an Embedded systems engineer, and coming to bilibili is a way to learn. To tell you the truth, I have visited bilibili for more than **1 years**. Recently, I decided to be an up (uploader) and share with you the **open source projects** I have made and learn from them. By joining GitHub, I can easily share open source projects.

-About me:

At present, I am in the third year of junior high school. Before that, I have hardly won any formal awards related to scientific and technological invention activities (~~but I don't mean I don't have that strength~~). I love embedded design, The legend of Zelda. Now I focus on in-depth study of **digital circuit, analog circuit, single chip microcomputer (ESP series and Atmega series at present) and various CAD softwares**.

But I also made a **rectifier filter board**, which is a double-layer PCB. 11V AC input, 5V and 12V output, Maximum Power **40W**.

The rectifier filter board

I'm not very good at this kind of formal communication, but I'm also easy to get along with.

I have established my account name as "**荒野四季SOTW**", GitHub nicknamed **SoTWild**, representing **Seasons Of The Wild**.

-Set up the account:

When you see this article, my account **should have been established**. In the next few days, I will publish news and videos from time to time, and upload open source materials (The update frequency may be **low**, but the quality will be **high**).

•Contact me:

bilibili: [荒野四季SOTW](#)

GitHub: [SoTWild](#)

-About open source:

Open source here includes source code and hardware resources. The purpose of open source is to share and learn from each other (Default GPL protocol)

In every "**open source documents**", I will carefully sort out the documents, and include a **markdown** format file like this article (article format, file format), including Chinese and English translation (there are also PDF, mainly for people who don't have suitable software to open **[software is Typora]**), to ensure that everyone can understand and successfully copy the project.

[To put it bluntly, it's a nanny level course]

Epilogue:

I hope I can learn more in the future, waiting for me (and my team).
